#### Section 1: Work and Power Answer Key

##### Paragraph 1

**Question:** Define work and provide its unit.

**Answer:** Work is the transfer of energy from one object to another, or from one form to another. Its unit is the **joule (J)**.

##### Paragraph 2

**Question:** Describe the power formula and explain its components.

**Answer:** The power formula is given by: **Power = Work / Time**

- Power is the rate at which work is done, measured in **watts (W)**.
- Work is the total energy transferred, measured in joules.
- Time is the duration over which the work is done, measured in seconds.

##### Paragraph 3

**Question:** A force of 50 N moves a box 10 meters in 5 seconds. Calculate the power exerted.

**Answer:**

Work done = Force  $\times$  Distance = 50 N  $\times$  10 m = 500 J  
Power = Work / Time = 500 J / 5 s = **100 W**

#### Paragraph 4

**Question:** Explain the relationship between force and power.

**Answer:** Power is directly proportional to force. This means that if the force applied increases, the power exerted also increases.

#### Paragraph 5

**Question:** A 100-watt light bulb operates for 5 hours. Calculate the total work done.

**Answer:**

Energy = Power  $\times$  Time = 100 W  $\times$  5 h = 500 Wh Since 1 Wh = 3600 J, Total work done = 500 Wh  $\times$  3600 J/Wh =  **$1.8 \times 10^6$  J**
