

THREE SHOTS AT PREVENTION THE HPV VACCINE AND THE POLITICS OF MEDICINES SIMPL

[Download Complete File](#)

Do you need all three doses of HPV vaccine? Three doses of HPV vaccine are recommended for teens and young adults who start the series at ages 15 through 26 years, and for immunocompromised persons. The recommended three-dose schedule is 0, 1–2 and 6 months.

Which HPV vaccine is 3 shots? GARDASIL 9 is a 3-shot vaccination series for adults.

What are the three vaccines approved for prevention of HPV? Three vaccines that prevent infection with disease-causing HPV have been licensed in the United States: Gardasil, Gardasil 9, and Cervarix.

Why is HPV vaccine not popular? Parents think their kids are too young to get the HPV vaccine. “The HPV vaccine was initially marketed as a vaccine to prevent sexually transmitted infections, so many parents think their children don't need it at an early age,” says Dr. Adjei Boakye.

Do adults need the HPV vaccine? Everyone, regardless of sex or gender, should get vaccinated before they're exposed to HPV through sexual activity. Remember — the HPV vaccine can only protect you from strains of HPV you haven't already been exposed to via an infected partner.

How many HPV injections do you need? The number of doses you need depends on your age and how well your immune system works: people under 25 usually have

1 dose. people aged 25 to 45 usually have 2 doses (given between 6 months and 2 years apart) people with a weakened immune system have 3 doses (given over a 12-month period)

What is the controversy with Gardasil? Plaintiffs claim the Gardasil vaccine's manufacturer did not provide adequate warning of possible side effects associated with the product and that Merck fraudulently concealed evidence about the health risks of the vaccine while at the same time misrepresenting that Gardasil could prevent cervical cancer.

Can a man give a woman HPV? Myth: A man can't give a woman HPV. Fact: A man can transmit HPV to a woman through intimate skin to skin contact, as well as contact with genital warts or within semen during vaginal sex. And remember, HPV can cause cervical cancer in women.

What causes HPV in females? HPV infection occurs when the virus enters your body, usually through a cut, abrasion or small tear in your skin. The virus is transferred primarily by skin-to-skin contact. Genital HPV infections are contracted through sexual intercourse, anal sex and other skin-to-skin contact in the genital region.

How long does HPV last in females? For 90 percent of women with HPV, the condition will clear up on its own within two years. Only a small number of women who have one of the HPV strains that cause cervical cancer will ever actually develop the disease.

How do you know if you have HPV as a woman? Most people with HPV do not know they have the infection. They never develop symptoms or health problems from it. Some people find out they have HPV when they get genital warts. Women may find out they have HPV when they get an abnormal Pap test result (during cervical cancer screening).

How to get HPV out of your system? No. There isn't a cure for HPV. Still, your immune system is incredibly effective at getting rid of the virus for you. Most HPV infections (about 90%) are cleared within a year or two.

Why did Japan stop the HPV vaccine? The sensationalized reports of adverse reactions following human papillomavirus (HPV) vaccination in Japan in 2013 caused the government to suspend its vaccination program recommendation.

What is negative about the HPV shot? The most common side effects of the HPV vaccine are mild and include: Pain, redness, or swelling in the arm where the shot was given. Fever. Dizziness or fainting (fainting after any vaccine, including HPV vaccine, is more common among adolescents)

Is the HPV vaccine banned? Gardasil and misinformation The post was not true. “Gardasil has not been banned anywhere and federal health officials say the vaccine cannot cause cancer,” spokespersons for Merck and a law firm representing various plaintiffs previously told the Associated Press.

What age is too late for the HPV vaccine? Teens and adults who get their first dose of the vaccine after their 15th birthday will need 3 doses spread out over 6 months. Young adults can get the HPV vaccine, too. Everyone can get the vaccine through age 26 years — and some adults ages 27 to 45 years may decide to get vaccinated after talking with their doctor.

Why did I get HPV if I'm vaccinated? Because the HPV vaccine does not protect against all types of HPV, it is possible that a fully vaccinated person could be infected with a type of HPV that is not contained in the vaccine. Most people will clear any type of HPV infection— but it may take months to do so.

Can you clear HPV after 50? There is no cure for HPV, but 70% to 90% of infections are cleared by the immune system and become undetectable. HPV peaks in young women around age of sexual debut and declines in the late 20s and 30s. But women's risk for HPV is not over yet: There is sometimes a second peak around the age of menopause.

Is HPV shot for life? It is still best for children to be vaccinated around age 11 or 12. Getting the HPV vaccine before first sexual contact protects a person over their entire life.

Can men get HPV? Any person who is sexually active can get the virus. Studies show that approximately 75% of sexually active men and women will acquire an
THREE SHOTS AT PREVENTION THE HPV VACCINE AND THE POLITICS OF MEDICINES SIMPL

anogenital HPV infection at some point in their lives. Most HPV infections occur without any symptoms and go away without treatment within two years.

Do you need 3 HPV shots? Dosage and Schedule HPV vaccination is administered as: A two-dose series (0, 6-12 months) for most persons who initiate vaccination at ages 9 through 14 years. A three-dose series (0, 1-2, 6 months) for persons who initiate vaccination at ages 15 through 45 years, and for immunocompromised persons.

What if I only got 2 doses of the HPV vaccine? “The normal schedule is zero-two-six [months zero, two and six] but if you just take zero and two, that's not as good,” she said. “You need a longer interval between the two doses to develop a memory response. WHO has shown that if you have [the vaccine at month] zero and then at six months, that it should be OK.”

Is one shot of HPV vaccine enough? Several recent studies have found that one dose of the HPV vaccine provides effective, durable protection against cervical cancer. Several recent clinical trials have shown that one dose of the HPV vaccine provides protection as effective and durable as a vaccine series with two or more doses.

What happens if you miss an HPV vaccination? The vaccine works best if administered before people become sexually active. Pass it on: People who start the HPV vaccine series but miss a dose should pick up where they left off.

Can a man give a woman HPV? Myth: A man can't give a woman HPV. Fact: A man can transmit HPV to a woman through intimate skin to skin contact, as well as contact with genital warts or within semen during vaginal sex. And remember, HPV can cause cervical cancer in women.

How to pass a safety manager interview? Make sure to highlight your communication skills, your ability to enforce rules, and your commitment to maintaining a safe work environment. Example: In my previous role, I encountered a situation where a team was cutting corners on our mandatory equipment checks, which was a clear safety violation.

- Reading comprehension (45 minutes)
- Listening comprehension (40 minutes)
- Written expression (45 minutes)
- Oral expression (15 minutes)

How is the exam scored?

The exam is scored on a scale of 100 points. A score of 60 points or higher is required to pass the exam.

What are the benefits of passing the exam?

Passing the Zertifikat Deutsch telc Deutsch B1 demonstrates your proficiency in German and can provide you with the following benefits:

- **Academic opportunities:** Admission to German universities and colleges
- **Career advancement:** Eligibility for job positions that require German language skills
- **Personal enrichment:** Improved communication skills and cultural understanding

Taking Sides: Clashing Views in Science, Technology, and Society

In a rapidly evolving world, science, technology, and society (STS) present complex and often contentious issues. Different perspectives collide, leading to heated debates and a need for critical evaluation. Here, we explore some of the key questions and contrasting views that shape STS today:

1. The Role of Science in Society

- **Question:** Should science be driven purely by intellectual curiosity or should it also serve practical societal needs?

- **Clashing Views:**

- **Pure Science:** Advocates prioritize free and open inquiry, arguing that scientific advancements will ultimately benefit society.
- **Applied Science:** Proponents emphasize the importance of directing research towards solving specific societal challenges.

2. The Impact of Technology on Society

- **Question:** Does technology enhance our lives or create new problems?

- **Clashing Views:**

- **Tech Optimists:** Believe that technological advancements lead to progress, economic growth, and improved living standards.
- **Tech Pessimists:** Worry about the potential negative consequences of technology, such as job displacement, privacy concerns, and environmental degradation.

3. Ethical Considerations in Science and Technology

- **Question:** Where do we draw the line between scientific progress and ethical concerns?

- **Clashing Views:**

- **Scientific Responsibility:** Scientists have a duty to ensure that their research is conducted ethically and does not harm society.
- **Scientific Freedom:** Some argue that scientists should be free to pursue research without unnecessary regulation or ethical restrictions.

4. The Public's Role in STS

- **Question:** To what extent should the public have a say in scientific and technological decisions that affect their lives?

- **Clashing Views:**

- **Public Engagement:** Advocates believe that the public should be actively involved in shaping STS policies and decisions.
- **Expert-Led:** Others argue that complex scientific and technological issues require expertise and should be left to scientists and policy makers.

5. The Future of STS

- **Question:** What challenges and opportunities will shape the future of STS?
- **Clashing Views:**
 - **Convergence:** Some predict a convergence between science, technology, and society, leading to transformative innovations.
 - **Fragmentation:** Others fear that STS will become increasingly fragmented, with different disciplines pursuing their own agendas.

These clashing views in STS reflect the complexity and diversity of our society. By critically examining different perspectives, we can foster informed discussions, make well-reasoned decisions, and navigate the challenges and opportunities presented by science, technology, and society.
