**Signal Processing First: A Question and Answer Interview with James H. McClellan**

**Q: What inspired you to write "Signal Processing First"? A:** I wanted to create a book that would make signal processing accessible to students with limited mathematical backgrounds. I believe that signal processing is an essential tool for anyone working in fields like engineering, science, and medicine, and I wanted to make it as approachable as possible.

**Q: What are the key concepts that you cover in the book? A:** The book covers a wide range of signal processing topics, including sampling, filtering, Fourier analysis, and image processing. I focus on the underlying concepts and principles, and I

provide numerous examples and applications to help students understand how signal processing is used in the real world.

**Q: What are some of the challenges that you faced when writing the book? A:**

One of the challenges was striking the right balance between mathematical rigor and accessibility. I wanted to provide students with a solid foundation in the theory of signal processing, but I also wanted to make sure that they could understand and apply the concepts without getting bogged down in complex mathematics.

**Q: What are your hopes for the future of signal processing? A:**

I believe that signal processing will continue to play an increasingly important role in our lives. As we move towards a more data-driven world, signal processing will be essential for extracting insights from vast amounts of data. I am excited to see how signal processing will be used to address new challenges and solve important problems in the future.

**Q: What advice would you give to students who are interested in learning about signal processing? A:**

My advice would be to start with the basics and build a strong foundation. There are many excellent resources available online and in libraries, and there are also many universities that offer courses in signal processing. With hard work and dedication, anyone can learn about signal processing and use it to solve important problems.
