Question:

Explain the difference between capital expenditures and revenue expenditures.

Answer:

Capital expenditures are incurred to acquire or improve long-term assets, such as buildings or equipment, which are used in the generation of revenue. These costs are capitalized and depreciated or amortized over the asset's useful life. Revenue expenditures, on the other hand, are incurred to generate revenue in the current period and are expensed immediately. Examples include advertising, utilities, and salaries.

Question:

What is the concept of materiality and how does it affect the recording of accounting transactions?

Answer:

Materiality refers to the significance of an accounting transaction or event to the financial statements as a whole. A transaction is considered material if it would affect the decisions of users of those statements. The concept of materiality is used to

determine which transactions and events need to be recorded and reported in the financial statements. Immaterial items may be aggregated or omitted without significantly affecting the overall accuracy and fairness of the statements.

Question:

Describe the different types of inventory costing methods.

Answer:

The three main inventory costing methods are:

- FIFO (First-In, First-Out): Assumes that the first units purchased are the first sold.
- LIFO (Last-In, First-Out): Assumes that the last units purchased are the first sold.
- Average Cost: Calculates the average cost of all units on hand and applies it to all units sold.

The choice of costing method can affect the reported cost of goods sold and the ending inventory value, which ultimately impacts the net income and financial ratios.

Question:

What are the key characteristics of long-term liabilities?
