- Passive voice is used when the subject is receiving the action.
- In a passive sentence, the verb is always in the past participle form.
- The subject of the passive sentence is usually preceded by "by" + the subject of the active sentence (if necessary).

1. The house was built by my father.
2. The concert was attended by thousands of people.
3. The car was driven by Mary.
4. The book was stolen from the library.

### How to Convert Active to Passive Voice

To convert an active sentence to passive, follow these steps:

1. Identify the object of the active sentence.
2. Make the object the subject of the passive sentence.
3. Change the verb to the past participle.
4. Add "by" followed by the subject of the active sentence (if necessary).

### Example:

- **Active:** John wrote the letter.

**What is RF Microwave Engineering?** RF (Radio Frequency) & Microwave Engineering is a subset of electrical engineering. These specialists design, construct and operate devices that transmit or receive radio waves. These devices include radios, wireless equipment, mobile phones etc.

**What is a microwave circuit?** Microwave circuits are a combination of passive and active components, whereby the passive part easily makes up 75% or more of the circuit real estate area.

**What is the subject of Microwave Engineering?** Microwave engineering pertains to the study and design of microwave circuits, components, and systems. Fundamental principles are applied to analysis, design and measurement techniques in this field. The short wavelengths involved distinguish this discipline from electronic engineering.

**Why is Microwave Engineering important?** Microwave Engineers are in high demand due to the critical role they play in various industries. Their expertise is

essential for the development of wireless communication networks, satellite systems, and radar technology.

**What does an RF engineer do?** The short answer is that RF Engineers are research and development (R&D) electrical engineers who specialize in designing, developing, testing, and deploying innovative new wireless networks and radio frequency (RF) payloads, subsystems, wireless networks, and component technologies for use in aircraft systems, ...

**What is the difference between RF and microwave?** The main difference between microwave and RF is related to their wavelength, which has impact on how the energy travel and is transmitted to the treated product. Each technology has its own advantages.

**What does a microwave engineer do?** Microwave engineers are electronics engineers who specialize in designing, manufacturing, testing, and installing electronic components and systems used to transmit and receive microwave, or short radio wave, signals. A wide variety of devices use microwave signals.

**Do microwaves get their own circuit?** Microwaves. A circuit must be dedicated for any built-in oven or microwave. Small countertop models typically have lower wattage than built-in units and can be plugged into a standard outlet on a shared circuit.

**What voltage do microwaves use?** "The information on the label tells us that the microwave oven needs 120 volts of electricity in the form of alternating current to operate, and draws 5 amps of current during its use."

**What are the disadvantages of microwave radiation?** Microwave radiation can heat body tissue the same way it heats food. Exposure to high levels of microwaves can cause a painful burn. Two areas of the body, the eyes and the testes, are particularly vulnerable to RF heating because there is relatively little blood flow in them to carry away excess heat.

**Who invented microwave engineering?** American electrical engineer Percy Spencer is generally credited with inventing the modern microwave oven after World War II from radar technology developed during the war.

**What is the spectrum of RF and microwave?** Radiofrequency (RF) and microwave (MW) radiation are electromagnetic radiation in the frequency ranges 3 kilohertz (kHz) - 300 Megahertz (MHz), and 300 MHz - 300 gigahertz (GHz), respectively.

**What is the frequency of a microwave?** Microwaves are electromagnetic waves with a frequency of 300 MHz to 300 GHz, corresponding to wavelengths of 1 mm to 1 m. Beyond 30 GHz, the microwave frequency range overlaps with the radio frequency range. Because of the nature of microwaves, they are governed by the Federal Communications Commission (FCC).

**What is the microwave theory?** With microwaves, heat is generated internally within the material as opposed to originating from external heating sources. As a result, the thermal gradients and flow of heat is the reverse of those in materials heated by conventional means.

**Why are microwaves so powerful?** Microwaves (the appliance) use a constant stream of microwaves (the actual waves) to cook food quickly. They heat water molecules up fast, and then keep heating them at the same rate (more on that here!). All microwaves default to cook at full power (Power Level 10).

**What is the highest salary for RF engineer?** RF Engineer salary in India ranges between ₹ 2.0 Lakhs to ₹ 8.7 Lakhs with an average annual salary of ₹ 4.1 Lakhs. Salary estimates are based on 4.6k latest salaries received from RF Engineers.

**What is another name for a RF engineer?** Radio Frequency/Microwave Engineer.

**Are RF Engineers in demand?** Current Demand RF engineering abilities are in great demand due to the growing use of wireless networks in both personal and professional applications.

**Do mobile phones use radio waves or microwaves?** Mobile phones work by transmitting and receiving radio frequency microwave radiation. The radio frequency (RF) emitted by mobile phones is stronger than FM radio signal which are known to cause cancer.

**Which is faster microwaves or radio waves?** Now, both the radio waves and microwaves are electromagnetic waves that travel at the same speed (speed of light).

**Is WiFi the same frequency as a microwave?** Microwave ovens and WiFi routers both use electromagnetic radiation in the same frequency band of 2.4 GHz, which can cause interference and affect the WiFi performance. The interference is caused by the leakage of microwaves into the WiFi signal, which can create noise and reduce the signal strength and quality.

**What is RF in engineering?** Radio-frequency (RF) engineering is a subset of electrical engineering involving the application of transmission line, waveguide, antenna, radar, and electromagnetic field principles to the design and application of devices that produce or use signals within the radio band, the frequency range of about 20 kHz up to 300 ...

**What does RF mean in electrical engineering?** RF stands for Radio Frequency, which represents the oscillation rate of electromagnetic waves. Frequency is measured in Hertz (Hz), which is equal to the number of oscillation cycles per second (1/s). RF can refer to frequencies as high as 300 GHz, or as low as 30 KHz.

**What are RF microwave devices?** They include high performance amplifiers, high power transmitters in both solid state and electron tube designs with outputs in the multi kilowatt range, antennas, attenuators and terminations, connectors and cable assemblies, couplers, ferrite components like isolator and circulators, filters of all types, limiters, ...

**What does a microwave engineer do?** Microwave engineers are electronics engineers who specialize in designing, manufacturing, testing, and installing electronic components and systems used to transmit and receive microwave, or short radio wave, signals. A wide variety of devices use microwave signals.
