### **The Bethesda System for Reporting Cervical Cytology: Definitions, Criteria, and Explanatory Notes**

The Bethesda System (TBS) is a standardized system for reporting cervical cytology results. It was developed by the National Cancer Institute (NCI) and the American Society for Colposcopy and Cervical Pathology (ASCCP) to improve the accuracy and consistency of cervical cancer screening.

## **What is the Bethesda System?**

TBS is a set of guidelines that pathologists use to interpret and report cervical cytology results. It includes definitions of cytological categories, criteria for classifying specimens, and explanatory notes to help pathologists understand the system.

## **What are the Cytological Categories of TBS?**

TBS defines six cytological categories:

- Negative for Intraepithelial Lesion or Malignancy (NILM)
- Atypical Squamous Cells of Undetermined Significance (ASC-US)
- Atypical Squamous Cells, Cannot Exclude High-Grade Squamous Intraepithelial Lesion (ASC-H)
- Low-Grade Squamous Intraepithelial Lesion (LSIL)
- High-Grade Squamous Intraepithelial Lesion (HSIL)
- Squamous Cell Carcinoma (SCC)

## **What are the Criteria for Classifying Cervical Cytology Specimens?**

The criteria for classifying cervical cytology specimens according to TBS include:

- The presence or absence of atypical cells
- The type of atypical cells
- The severity of the atypia
- The presence or absence of other findings, such as inflammation or infection

## **What are the Explanatory Notes of TBS?**

TBS also includes explanatory notes that provide additional guidance to pathologists. These notes clarify the definitions of cytological categories, discuss the differential diagnosis of atypical cells, and recommend follow-up management for each cytological category.

## **How is TBS Used in Cervical Cancer Screening?**

TBS is used as the standard reporting system for cervical cytology results in the United States and many other countries. It helps ensure that results are interpreted and reported accurately and consistently, which is essential for effective cervical cancer screening and prevention.
