Which is better N scale or HO scale? It depends on your circumstances. Many beginners choose N scale trains because they require less space. They're often cheaper, so you won't lose as much if you decide not to pursue the hobby. However, most veterans prefer HO scale trains because they're bigger and allow for more details and features.

What is a 2% grade in HO scale? The simplest is the slope itself, or how steep the rise is. Railroaders usually express that as a percentage. If a train rises 2 inches for every 100 inches it travels, we refer to this as a 2% grade. On a grade, your locomotive is not only moving the train, it's lifting it – or holding it back.

What is the most common HO scale track? HO or H0 is a rail transport modelling scale using a 1:87 scale (3.5 mm to 1 foot). It is the most popular scale of model railway in the world. The rails are spaced 16.5 millimetres (0.650 in) apart for modelling 1,435 mm (4 ft 8 1/2 in) standard gauge tracks and trains in HO.

What is the difference between a #4 and #6 turnout? 4 turnout requires four units of length to spread one unit, while a no. 6 turnout requires six units of length to spread one unit. In short, the higher the frog number, the gentler the angle.

What is the size of HO scale #6 turnout?

What radius is a #4 HO turnout? Without measuring, I feel the #6 is comparable to a 22" radius, and the #4 is comparable to a 18" radius. In general, try to use the #6 everywhere you can, even if you have to carefully trim it down to the points and frog to get it to fit, and #8's on long stretches of high speed main line track.
