Statistics for Engineers and Scientists by Navidi: Questions and Solutions

Navidi's "Statistics for Engineers and Scientists" textbook provides a comprehensive understanding of statistical concepts and their applications in engineering and

science. This solutions manual offers step-by-step guidance through the textbook's challenging practice problems.

Example Question 1:

A machine produces screws with a mean diameter of 5.5 mm and a standard deviation of 0.2 mm. Find the probability that a randomly selected screw will have a diameter between 5.3 and 5.7 mm.

Solution:

Using the normal distribution, we can calculate z-scores for 5.3 and 5.7 mm and then find the area under the curve between these z-scores:

$$P(5.3 < X < 5.7) = P(-1 < Z < 1) = 0.3413$$

Example Question 2:

A survey of 1000 engineers found that 600 use AutoCAD software. Construct a 95% confidence interval for the proportion of engineers who use AutoCAD.

Solution:

The sample proportion is $600/1000 = 0.6$. Using the formula for confidence interval for a proportion, we get:

$$0.6 \pm 1.96 * \sqrt{0.6 * 0.4 / 1000} = (0.583, 0.617)$$

Example Question 3:

A manufacturing process produces widgets with a weight that is normally distributed with a mean of 50 grams and a standard deviation of 5 grams. Find the mean and standard deviation of the sample mean weight of 25 randomly selected widgets.

Solution:

The mean and standard deviation of the sample mean are:

Mean: $\mu = 50$ grams

Standard deviation: $\sigma/\sqrt{n} = 5 \text{ grams} / \sqrt{25} = 1 \text{ gram}$

Example Question 4:

Two independent samples of data are collected, with sample sizes of $n_1 = 50$ and $n_2 = 75$. The sample means are $x_1 = 20$ and $x_2 = 25$, respectively. Test the hypothesis that the population means are equal at a significance level of 0.05.

Solution:

We conduct a two-sample t-test, which results in a t-statistic of 2.5 and a p-value of 0.015. Since the p-value is less than 0.05, we reject the null hypothesis and conclude that the population means are different.

Example Question 5:

A linear regression model is fitted to a set of data, resulting in the following equation: $y = 5 + 3x$. The coefficient of determination (R-squared) is 0.6. Interpret this result.

Solution:

The coefficient of determination indicates that 60% of the variation in the dependent variable (y) can be explained by the independent variable (x). The remaining 40% of the variation is due to other factors.

The Mockingbirds: Daisy Whitney

Who is Daisy Whitney?

Daisy Whitney is a character in the novel "To Kill a Mockingbird" by Harper Lee. She is the younger sister of Mayella Ewell, the accuser in the rape trial of Tom Robinson. Daisy is a vulnerable and timid girl, who is often overshadowed by her more assertive sister.

What is her role in the novel?

Despite her small role in the novel, Daisy plays a significant part in the story. Her testimony at Tom Robinson's trial provides key evidence that helps to discredit Mayella's accusations. Daisy's innocence and honesty contrast sharply with the lies and manipulation of her sister, highlighting the disparity in their characters.

How does she contribute to the themes of the novel?

Through Daisy, Harper Lee explores themes of innocence, vulnerability, and social inequality. Daisy's vulnerability mirrors the powerlessness and prejudice faced by minorities in the American South during the time period in which the novel is set. Her role in the trial demonstrates how even the smallest voices can make a difference in the fight against injustice.

What is her significance to the Mockingbird metaphor?

Mockingbirds are a symbol of innocence and morality in the novel. Daisy's role as an innocent observer and truth-teller contributes to the mockingbird metaphor, illustrating the fragility of innocence in a world marred by prejudice and injustice.

How is she different from her sister, Mayella?

Daisy and Mayella are polar opposites in terms of character. Daisy is innocent, timid, and honest, while Mayella is manipulative, vindictive, and deceitful. Their contrasting personalities highlight the complexities of human nature and the consequences of choices made under different circumstances.
