Explanation

- The third law of thermodynamics is not a law of thermodynamics in the strict sense of the word. It is a postulate that states that the entropy of a perfect crystal at absolute zero is zero.
- The first law of thermodynamics is a fundamental law of physics that has been tested and verified countless times.
- A thermodynamic system is a collection of matter that is separated from its surroundings by a real or imaginary boundary.
- The second law of thermodynamics is a fundamental law of physics that has important implications for the direction of natural processes.
- A reversible process is one that can be reversed without any change in the entropy of the system or its surroundings.
