## **Solved Examples in Chemical Engineering by Roy**

### **Solved Example 1:**

Question: A chemical reaction with the stoichiometric equation  $A + 2B \rightarrow 3C$  is carried out in a continuous reactor with a feed rate of 100 mol/min of A and 200 mol/min of B. Determine the limiting reactant and calculate the molar flow rate of C.

Answer: The limiting reactant is B. The molar flow rate of C is 150 mol/min.

### **Solved Example 2:**

Question: A gas mixture with a composition of 20% methane, 30% ethane, and 50% propane is compressed adiabatically from 1 bar and 298 K to 5 bar. Determine the final temperature of the mixture.

Answer: The final temperature of the mixture is 343 K.

### **Solved Example 3:**

## **Transnational Corporations and Uneven Development in the International Business**

### **Paragraph 1:**

Globalization has led to the emergence of transnational corporations (TNCs), which operate in multiple countries. These corporations often play a significant role in the international business landscape and have the potential to impact economic development both positively and negatively.

### **Paragraph 2:**

One key question is how TNCs contribute to uneven development. Some argue that TNCs exploit developing countries by paying low wages, disregarding environmental regulations, and transferring profits abroad. Others suggest that TNCs bring investment, technology, and employment opportunities, which can stimulate economic growth.

### **Paragraph 3:**

The internationalization of capital has further fueled the debate. When capital flows from developed countries to developing countries, it can create opportunities for economic growth. However, it can also lead to increased inequality if the benefits are not shared equitably.

### **Paragraph 4:**

The impact of TNCs and capital flows on the Third World is complex. While they can contribute to development, they can also exacerbate inequalities. It is essential to consider the specific context and policies in each country to determine the overall impact.

### **Paragraph 5:**

---

In conclusion, the relationship between transnational corporations, uneven development, and the internationalization of capital is multifaceted. By understanding the different perspectives and considering the specific circumstances of each case, we can better address the challenges and harness the potential benefits associated with globalization.
