### Limiting Reactants Gizmo Student Exploration

#### Experiment Overview

The Limiting Reactants Gizmo is an interactive simulation that allows students to explore the concept of limiting reactants in chemical reactions. In this experiment, students will add varying amounts of two reactants, A and B, to a reaction vessel and observe the results. They will then identify the limiting reactant and calculate the theoretical yield of the reaction.

#### Questions and Answers

##### 1. What is the limiting reactant in a chemical reaction?

The limiting reactant is the reactant that is completely consumed in the reaction, limiting the amount of product that can be formed.

##### 2. How can you identify the limiting reactant?

The limiting reactant can be identified by comparing the mole ratios of the reactants to the coefficients in the balanced chemical equation. The reactant with the smallest mole ratio is the limiting reactant.

##### 3. What is the theoretical yield of a reaction?

The theoretical yield is the maximum amount of product that can be formed in a reaction, based on the stoichiometry of the balanced chemical equation.

#### **4. How do you calculate the theoretical yield?**

The theoretical yield can be calculated using the mole ratios of the reactants in the balanced chemical equation. Multiply the moles of the limiting reactant by the mole ratio of the product to the limiting reactant.

#### **5. What factors can affect the actual yield of a reaction?**

Factors that can affect the actual yield of a reaction include:

- Impurities in the reactants
- Side reactions
- Reaction conditions (e.g., temperature, pressure)
