Theoretical Statistics Lecture 4: Statistics at UC Berkeley

In the fourth lecture of the Theoretical Statistics course at UC Berkeley, students delved into foundational concepts of statistical inference, with a specific focus on hypothesis testing. Here are some key questions and answers from the lecture:

1. What is hypothesis testing?

- Hypothesis testing is a statistical procedure used to determine whether there is sufficient evidence to reject a particular hypothesis about a population parameter.

2. What are the components of a hypothesis test?

- **Null hypothesis (H_0):** A statement that there is no significant difference or effect.
- **Alternative hypothesis (H_a):** A statement that there is a significant difference or effect.
- **Test statistic:** A numerical measure that quantifies the discrepancy between the sample data and the null hypothesis.
- **Significance level (α):** The probability of rejecting the null hypothesis when it is true (Type I error).

3. What is the p-value?

- The p-value is the probability of observing a test statistic as extreme as or more extreme than the one calculated from the sample data, assuming the null hypothesis is true. It provides a measure of the strength of evidence against the null hypothesis.

4. How do we make a decision in hypothesis testing?

- If the p-value is less than the significance level ($p < \alpha$), we reject the null hypothesis and conclude that there is sufficient evidence to support the alternative hypothesis.
- If the p-value is greater than or equal to the significance level ($p \geq \alpha$), we fail to reject the null hypothesis and conclude that there is not sufficient evidence to reject it.

5. What are the limitations of hypothesis testing?

- Hypothesis testing can only provide evidence against a null hypothesis, not proof of an alternative hypothesis.
- The choice of significance level can influence the outcome of the test.
- Hypothesis testing relies on assumptions about the underlying distribution of the data, which may not always be met in practice.
