What is a solution containing the maximum amount of solute possible at that temperature? Solution which contains maximum possible amount of solute at any given temperature is called a saturated solution. At any particular temperature, a solution that has dissolved as much solute as it is capable of dissolving is said to be a saturated solution.

What is a cyberspace persona? Internet identity (IID), also online identity, online personality, online persona or internet persona, is a social identity that an Internet user establishes in online communities and websites.

What is a solution that can dissolve more solute at given temperature called? Therefore, A solution in which more of the solute can be dissolved in the given solvent at a given temperature is known as unsaturated solution.

What solution can dissolve more solute? Unsaturated: An unsaturated solution is defined as having anything less than the maximum amount of dissolved solute. This solution has the capacity to dissolve more solute.

What is the name for a tribal healer? A medicine man (from Ojibwe mashkikiwinini) or medicine woman (from Ojibwe mashkikiwininiikwe) is a traditional healer and spiritual leader who serves a community of Indigenous people of the Americas. Each culture has its own name in its language for spiritual healers and ceremonial leaders.

Why is it called cyberspace? The term cyberspace was first used by the American-Canadian author William Gibson in 1982 in a story published in Omni magazine and

then in his book Neuromancer. In this science-fiction novel, Gibson described cyberspace as the creation of a computer network in a world filled with artificially intelligent beings.

What are the three types of cyberspace? Cyberspace can be viewed as three layers (physical, logical, and social) made up of five components (geographic, physical network, logical network, cyber persona, and persona).

What is a solution that Cannot dissolve any more solute at the given conditions? More solute cannot be dissolved at a given temperature in a saturated solution. This is because the solute dissolves in a solvent due to the space between the solvent particles, but with the continuous addition of solute, the space between the solvent particles is filled.

What kind of solution has reached its limit to the amount of solute it can hold? When a solution contains the maximum amount of solute that can dissolve under a given set of conditions, it is a saturated solution.

What do you call to the solute that cannot be dissolved in solvent? The correct option is A Saturated solution. Saturated is also used to refer a state of a solution where no more solute can be dissolved in it. In other words, maximum amount of solute is dissolved in the solvent.

What is the maximum amount of solute at a given temperature? Answer and Explanation: The solution that contains the maximum quantity of solute dissolved at a given temperature, then the solution is said to be a saturated solution. At that given temperature, it is not possible to dissolve more solute in the solvent once the solution becomes saturated.

What is a solution that contains the maximum amount of a solute at that temperature and pressure? When a solution contains the maximum amount of solute that can dissolve under a given set of conditions, it is a saturated solution.

What kind of solution can have more solute dissolved in it at a certain temperature? Due to the availability of a smaller number of solute particles in it, the unsaturated solution is capable of dissolving more solutes in it at a certain temperature. Hence, the solution that could dissolve more solute at a particular

temperature is known as an unsaturated solution.

What is a solution containing a large amount of solute? Concentrated solution is a solution that contains a large amount of solute relative to the amount that could dissolve.
