The Promise of Happiness: An Interview with Sara Ahmed

Question 1: What are the key arguments of your book, "The Promise of Happiness"?

Sara Ahmed: In "The Promise of Happiness," I explore the ways in which happiness is often used as a means of social control. I argue that the ideology of happiness encourages us to strive for individual well-being, even if it comes at the expense of others. This pursuit of happiness can lead to a narrowing of our moral horizons and a decreased willingness to challenge inequalities.

Question 2: How does happiness contribute to the production of social hierarchies?

Ahmed: Happiness can be used to justify existing social arrangements and to silence those who question the status quo. For example, those who are disadvantaged may be told that they should be happy with their lot, even if they are living in poverty or oppression. This can prevent them from seeking social and economic justice.

Question 3: What are the dangers of equating happiness with success?

Ahmed: When happiness is equated with success, it can lead us to believe that those who are unhappy are somehow failing. This can create a sense of shame and stigma for those who are struggling. It can also lead to a culture of judgment and competition, where people feel pressured to constantly compare themselves to others.

Question 4: How can we resist the promise of happiness and cultivate more inclusive notions of well-being?

Ahmed: We need to challenge the idea that happiness is the only worthwhile goal. We should also recognize the ways in which our own happiness may be dependent on the suffering of others. Instead of focusing solely on our own well-being, we should strive to create a more just and equitable world for all.

Question 5: What role do emotions play in the pursuit of happiness?

Ahmed: Emotions play a complex role in the pursuit of happiness. On the one hand, emotions such as joy and gratitude can make us feel good and contribute to a sense of well-being. On the other hand, emotions such as sadness and anger can be painful and make it difficult to achieve happiness. However, it is important to recognize that all emotions are valid and that there is no single "right" way to feel.

Question 4: What Factors Contribute to the Development of the H Factor?

- Early childhood experiences of neglect or abuse.
- Parental modeling of narcissistic or entitled behavior.

- Socioeconomic status, with individuals from higher socioeconomic backgrounds being more likely to develop H factor traits.

Question 5: How Can We Address the H Factor?

- Societal norms that encourage cooperation and discourage self-entitlement.
- Therapeutic interventions that target specific H factor traits, such as cognitive behavioral therapy or psychodynamic therapy.

Conclusion
