### **How do you start drawing Chibis?**

**How to chibify a character?** When you sketch a chibi character, try to imagine a jointed doll and break up the body into simpler shapes. Use a slightly elongated circle for the head, a near pear shape for the torso, circles and long ellipses for the limbs. Hands and feet on chibis are always small, sometimes even omitted and only hinted at.

### **How to make a chibi face?**

**How to color chibi characters?** For coloration in general, avoid the deeper, harsher ends of the spectrum. “Good colors for chibi are very soft, pastel colors,” says Larson. That softness also emphasizes the cuteness that chibi characters embody.

**Are Chibis cute?** The Chibi style easily falls under the Japanese category of Kawaii, with the specific proportions being exaggerated in the ways that they are. With it being as cute as it is, the Chibi style allows for easy advertisement in the culture, and even in other countries.

## **Tutorial Version 1: Chillers**

### **What is a Chiller?**

A chiller is a machine that removes heat from a liquid or gas, cooling it to a specific temperature. Chillers are used in a variety of applications, including air conditioning, refrigeration, and industrial processes.

### **How does a Chiller Work?**

Chillers work by using a refrigerant, which is a chemical that can absorb and release heat. The refrigerant is compressed in a compressor, which raises its temperature and pressure. The high-pressure refrigerant is then passed through a condenser, where it releases heat and condenses into a liquid. The liquid refrigerant then passes through an expansion valve, which reduces its pressure and temperature. The low-pressure refrigerant is then passed through an evaporator, where it absorbs heat and evaporates into a gas. The gas refrigerant is then compressed again, and the cycle repeats.

### **What are the Different Types of Chillers?**

There are two main types of chillers: air-cooled chillers and water-cooled chillers. Air-cooled chillers use fans to circulate air over the condenser, while water-cooled chillers use water to cool the condenser. Water-cooled chillers are more efficient than air-cooled chillers, but they require a source of water.

### **What are the Applications of Chillers?**

Chillers are used in a variety of applications, including:

- Air conditioning: Chillers are used to cool air in buildings.
- Refrigeration: Chillers are used to cool food and beverage products.
- Industrial processes: Chillers are used to cool water and other liquids used in industrial processes.

---

### **How do I Choose the Right Chiller?**

HOW TO DRAW MANGA CHIBIS CUTE CRITTERS DISCOVER TECHNIQUES FOR CREATING  
ADORA

When choosing a chiller, it is important to consider the following factors:

- Capacity: The capacity of a chiller is measured in tons of refrigeration (TR). A TR is the amount of heat that can be removed by a chiller in one hour.
- Efficiency: The efficiency of a chiller is measured by the Energy Efficiency Ratio (EER). The higher the EER, the more efficient the chiller.
- Size: The size of a chiller is important to consider when selecting a location for the chiller.
- Cost: The cost of a chiller is an important factor to consider when making a purchase decision.
