What is the British standard for lifts? BS 7522:2023 has been modernized to incorporate new lifts, new safe working procedures and improvements to the safety of existing lifts. It also reflects experience gained in the industry and from accidents since the last revision to include new guidance in new areas (see What's new for details).

What is the latest elevator code? Currently, ASME A17. 1-2022: Safety Code for Elevators and Escalators serves as the basis for the safe design, construction, installation, operation, testing, inspection, maintenance, alteration, and repair of elevators, dumbwaiters, escalators, moving walks, and material lifts.

What is the standard code for lift? With effect from 1 July 2021, SS550:2020 will replace SS550:2009 as the acceptable solution in BCA's Approved Document for the design and installation of lifts under the Building Control Regulations.

What is the ASME Code for lifts? ASME 17.1 is the "Safety Code for Elevators and Escalators." This includes the safety code requirements for elevators, escalators, dumbwaiters, moving walks, material lifts, and dumbwaiters with automatic transfer devices.

Do lift shafts need to be ventilated? In order to reduce 'buffeting' for lifts with a speed exceeding 2.50m/s, pressure release vents might be needed. A single lift can require a minimum of 0.3m² with an additional vent area of 0.1m² for each additional lift sharing a common well".

Do lift shafts need to be insulated? Insulation of the Elevator Shaft Insulating the elevator shaft will prevent cold air from seeping into the elevator car, helping to maintain a comfortable temperature. The type of insulation used will depend on the

NEW EUROPEAN STANDARDS FOR LIFTS EN 81 20 AND EN 81 50

specific needs of the building, such as the size of the elevator shaft, the climate, and the budget.

What is the EN 81 2 standard? The object of this standard is to define safety rules related to passenger and goods/passenger-lifts with a view to safeguarding persons and objects against the risk of accidents associated with the user-maintenance and emergency operation of lifts.

What is BS EN 81 20? The EN 81-20:2014 standard requires access or inspection doors instead of inspection “trapdoors” to address safe and easy access for engineers. The new requirements are as follows: • Machine-room and shaft access doors shall have a minimum height of 2 m and a minimum width of 0.6 m.

What do Europeans call elevators? In the UK, and much of Europe, ELEVATORS are called LIFTS.

What are European standards codes?

What is the EN 81 standard for elevators? The EN 81-20:2014 standard now requires that the landing door providing access to the pit must be able to be opened from the shaft so that technicians can exit the elevator shaft, even if the relevant landing door would be closed. All glass used in the elevator shaft must be laminated.

What is the 3-5 rule for elevators? The clearance between the hoistway doors or gates and the hoistway edge of the landing sill shall not exceed 3 inches (76 mm). The distance between the hoistway face of the landing door or gate and the car door or gate shall not exceed 5 inches (127 mm).
