Is Faizabad University UGC approved? The university was established in the year 1975 as an affiliating public university. The university is approved by the UGC, NAAC and Scheduled in Association of Indian Universities.

What is the root cause of cancer? Cancer is caused by certain changes to genes, the basic physical units of inheritance. Genes are arranged in long strands of tightly packed DNA called chromosomes. Cancer is a genetic disease—that is, it is caused by changes to genes that control the way our cells function, especially how they grow and divide.

What are cancer causing germs called? Known to cause cancer. *Helicobacter pylori* colonizes the human stomach and duodenum. It is described as a Class 1 carcinogen. In some cases it can cause stomach cancer and MALT lymphoma.

What was cancer called before it was called cancer? Hippocrates is credited with naming "cancer" as "karkinoma" (carcinoma) because a tumor looked like a "crab" ("karkinoma" is Greek for "crab") in that there is a central body to a tumor and the tumor extension appeared as the legs of the "crab".

What are the causes of cancer? A number of forces can cause gene mutations, such as smoking, radiation, viruses, cancer-causing chemicals (carcinogens), obesity, hormones, chronic inflammation and a lack of exercise.

What is the biggest cause of cancer?

Why is cancer so common now? Genetic clues The prominence of gastrointestinal cancers and the coincidence with dietary changes in many countries point to the rising rates of obesity and diets rich in processed foods as likely culprits in contributing to rising case rates.

Which bacteria cause cancer? *H. pylori* is the first bacterium to be termed a definite cause of cancer in humans by the International Agency for Research on Cancer. Mutagenic bacterial metabolites are also suspected to increase risk for cancer. This model is best exemplified in colon cancer.

What virus turns into cancer? HPV infection causes cells to undergo changes. If not treated these cells can, over time, become cancer cells. Once high-risk HPV infects cervical cells, it interferes with the ways in which these cells replicate, divide, and communicate with one another, causing infected cells to multiply in an uncontrolled manner.

Is cancer a virus or a germ? Cancer causes a body's cells to mutate, multiply, or grow abnormally. Cancer is not defined as a viral or bacterial infection. However, specific viral or bacterial infections can cause certain types of cancer.

What stops cancer cells from growing? Tyrosine kinase inhibitors Tyrosine kinases help to send growth signals in cells, so blocking them stops the cell growing and dividing. Cancer growth blockers can block one type of tyrosine kinase or more than one type. TKIs that block more than one type of tyrosine kinase are called multi TKIs.

What is the deadliest cancer called? Lung and bronchial cancer causes more deaths in the U.S. than any other type of cancer in both men and women.

How does cancer begin? DNA determines the structure, function and behaviour of a cell. or damage to it, a gene can mutate. Mutated genes don't work properly because the instructions in their DNA get mixed up. This can cause cells that should be resting to divide and grow out of control, which can lead to cancer.

What is the hardest cancer to cure?

Which cancer is not curable?

What type of cancer kills fastest? If defining "fastest-killing" cancer is based on which cancer has the worst 5-year relative survival rate, then it would be a tie between pancreatic cancer and malignant mesothelioma (a relatively rare cancer in the U.S. with about 3,000 cases a year).

What is 90% of cancer caused by? 90 percent of cancer cases are caused by environmental factors. Therefore, a large proportion of them are preventable with good living habits and healthy environments, as remarked the director of the International Agency for Research in Cancer, from the World Health Organization (WHO), Christopher P.

What are the top 3 foods that cause cancer?

What food grows cancer cells?

How can we avoid cancer?

Can stress cause cancer? The truth. Research has not proven a definite cause-and-effect relationship between stress and cancer. The connection between your emotional (psychological) health and physical health is very complex. Psychological stress can affect your body.

Does sugar cause cancer? Sugar is not a carcinogenic (cancer-causing) substance. However, over-consumption of sugar, particularly added sugars in processed beverages and foods, can contribute to obesity which is an important risk factor for cancer. There is no evidence that consuming sugar makes cancer cells grow faster or cause cancer.

How does cancer begin? DNA determines the structure, function and behaviour of a cell. or damage to it, a gene can mutate. Mutated genes don't work properly because the instructions in their DNA get mixed up. This can cause cells that should be resting to divide and grow out of control, which can lead to cancer.

What do most cancers occur from? Current research suggests that environmental factors such as tobacco, diet, infection, alcohol, drugs, radiation and chemicals are more important than genetic (hereditary) factors in determining development of most cancers. All cancer is triggered by altered genes.

What are the top 10 cancer fighting foods?

What lifestyle factors cause cancer?

To Save Everything: Technology Solutionism and the Urge to Fix Problems That Don't Exist

In an era characterized by rapid technological advancements, we often find ourselves drawn to solutions that promise to simplify and enhance our lives. However, it is essential to question whether all technological solutions are truly necessary or effective. The concept of "solutionism" refers to the tendency to rely on technology to solve every problem, regardless of its complexity or appropriateness.

Q: What is technology solutionism? A: Technology solutionism is the belief that technology can solve any problem, even those that are not well-defined or may not actually exist. It assumes that technology is always the best answer, without

considering potential unintended consequences or the need for human involvement.

Q: Why is technology solutionism a concern? A: Solutionism can lead us to overlook simpler, more cost-effective, or more sustainable solutions. It can also create a false sense of security, leading us to believe that technology can magically fix any problem without addressing the underlying causes.

Q: What are the downsides to technology solutionism? A: Solutionism can:

- Foster a culture of laziness and dependence on technology
- Ignore the importance of human ingenuity and creativity
- Divert resources away from more pressing issues
- Entrench existing biases and inequalities

Q: Are there any benefits to technology solutionism? A: While solutionism can be problematic, it can also serve as a catalyst for innovation and progress. When used responsibly, technology can provide valuable tools for addressing genuine problems and improving our lives.

Q: How can we avoid the pitfalls of technology solutionism? A: To avoid the pitfalls of solutionism, it is crucial to critically evaluate technological solutions, consider their potential consequences, and ensure that they are truly addressing real problems. We must also foster a culture that values critical thinking, problem-solving, and creativity, both with and without the aid of technology.

The Obsessions of Georges Bataille: Community and Communication (SUNY Series in Contemporary French Thought)

Introduction

Georges Bataille, the influential French philosopher and writer, grappled with profound obsessions throughout his life. These obsessions, centered on themes of community, communication, and transgression, were explored in his enigmatic and provocative writings.

Community: The Eros of Belonging

Bataille's obsession with community stemmed from a yearning for authentic connection and shared experiences. He believed that true community was not simply a collection of individuals, but a transformative force that fostered a profound sense of belonging and shared purpose. According to Bataille, the "eros of belonging" drives humans to seek community and to engage in ritualistic practices that deepen their bonds.

Communication: The Absence and Excess

Bataille was equally fascinated by the complexities of communication. He recognized its potential for fostering community but also acknowledged its inherent limitations and failures. Bataille often employed fragmented and enigmatic language in his writings, creating a sense of absence and silence. Yet, he also embraced excess and transgression, seeing in them the potential for liberating communication from its conventional constraints.

Transgression and the Sacred

Bataille's exploration of community and communication was inextricably linked with his fascination with transgression and the sacred. He believed that transgression, or the violation of societal norms, was a necessary force for renewal and transcendence. Bataille argued that the sacred was not simply the opposite of the profane, but a realm of excess and violence that could be accessed through transgressive practices.

The SUNY Series in Contemporary French Thought

"The Obsessions of Georges Bataille: Community and Communication" is part of the SUNY Series in Contemporary French Thought, which publishes critical examinations of the work of major French intellectuals. This series provides in-depth analyses of the philosophical, literary, and cultural contributions of these thinkers, offering valuable insights for scholars and students alike.

Conclusion

Georges Bataille's obsessions with community, communication, and transgression continue to resonate with readers today. His enigmatic and provocative writings challenge conventional notions of belonging, language, and the sacred, offering a unique perspective on the human condition. Through the lens of Bataille's obsessions, we gain a deeper understanding of the complexities of human relationships, the power of communication, and the transformative potential of transgression.
