Understanding Oil Viscosity and Transmission Fluids**

What does 80W mean on oil?

80W refers to the viscosity of oil at low temperatures. It indicates that the oil has a weight of 80 at 0 degrees Celsius (32 degrees Fahrenheit). The lower the number, the thinner the oil at cold temperatures.

What is 80W transmission oil?

80W transmission oil is a type of gear oil specifically designed for use in vehicle transmissions. It provides lubrication and protection to the gears, bearings, and other transmission components.

What viscosity is Redline MTL?

Redline MTL (Manual Transmission Lubricant) is a 70W80 gear oil. This viscosity rating indicates that the oil is relatively thin at low temperatures and thicker at higher temperatures, providing a balance of fluidity and protection.

What is the difference between Redline MT90 and MTL?

Redline MT90 and MTL are both gear oils designed for manual transmissions. However, MT90 is a 75W90 oil, while MTL is a 70W80 oil. MT90 is slightly thicker than MTL and offers better protection at high temperatures.

Which is better, 75w90 or 80w90?

75W90 and 80W90 are both gear oil viscosities. 75W90 is slightly thicker than 80W90, providing better viscosity at higher temperatures. The choice between the two depends on the specific transmission requirements.

Is 10W40 the same as SAE 80?

No, 10W40 and SAE 80 are not the same. 10W40 is a multi-grade engine oil that has a viscosity of 10W at low temperatures and 40 at higher temperatures. SAE 80 is a single-grade engine oil that only has a viscosity of 80 at operating temperatures.

What does SAE 80W mean?

SAE 80W indicates that the oil has a viscosity grade of 80W according to the Society of Automotive Engineers (SAE) standards. This rating specifies the oil's thickness at low temperatures.

Is 80W the same as 80W90?

No, 80W and 80W90 are not the same. 80W is a gear oil viscosity at low temperatures, while 80W90 is a gear oil viscosity at both low and high temperatures.

What is the difference between GL4 and GL5 gear oil?

GL4 and GL5 are gear oil performance ratings defined by the American Petroleum Institute (API). GL4 oils are suitable for transmissions with moderate to severe loads, while GL5 oils are specifically designed for hypoid gears, which are found in most rear-wheel drive vehicles.

Can you use 75W90 instead of 75W80?

Yes, you can typically use 75W90 instead of 75W80 in a transmission that requires 75W80. However, it's always best to consult your vehicle's owner's manual to confirm the recommended viscosity.

What type of oil is Redline?

Redline is a manufacturer of high-performance synthetic lubricants, including engine oils, gear oils, and transmission fluids.

What viscosity is ATF?

ATF (Automatic Transmission Fluid) typically has a viscosity rating between 5W30 and 10W40, depending on the specific transmission requirements.

What is the difference between short gearing and tall gearing motorcycle?

Short gearing provides a lower top speed but better acceleration, while tall gearing provides a higher top speed but less acceleration. The choice depends on the intended use of the motorcycle.

What does MT90 16 mean?

MT90 16 is a gear oil manufactured by Redline that has a viscosity of 75W90 and meets API GL-5 specifications. The "16" indicates the additive package used in the oil.
