PDTCs are the same as regular diagnostic trouble codes (DTC), but they cannot be erased by clearing the DTCs with a scan tool or by disconnecting the vehicle's battery. PDTCs can only be cleared by the OBD II system once it has verified that the previously identified defects are no longer present.

Will a fault code clear itself? Will your check engine light turn off by itself? In most cases, successfully repairing the issue that caused your light to come on will cause the check engine light to turn off automatically—but only after 10 to 20 “cycles”.

How do I check fault codes without a scanner? Cycle the ignition key from the “ON” position to the “OFF” position and back to the “ON” position (do not start the engine) three times in quick succession. Release the odometer reset button. The odometer display may now show diagnostic trouble codes (DTCs) associated with the Check Engine Light.

What is the engine fault code? Diagnostic Trouble Codes, also known as engine fault codes, are five-digit codes that identify a particular problem in the car. These codes are displayed on the scanning tool when it's connected to the OBD system. The five-digit DTC includes one letter usually followed by four numbers (e.g. P1234).
