## **Download Complete File**

What is the origin of the Hawaiian Islands? The Hawaiian Islands were formed by volcanic activity. The Hawaiian Emperor seamount chain is a well-known example of a large seamount and island chain created by hot-spot volcanism. Each island or submerged seamount in the chain is successively older toward the northwest.

What are the geological origins of the Hawaiian Islands? The formation of these islands began nearly 70 million years ago when lava extruded from a stationary "hot spot" in the ocean floor and created the islands one by one as the Pacific Tectonic Plate moved gradually to the northwest.

What happens to the age of the islands as you move further northwest on the Hawaiian island chain? The ages of rocks from several locations in the Hawaii chain of islands demonstrate that the islands get older as they move northwest, with the Big Island (Hawaii) being the youngest at less than 0.7 million years old and continuously developing.

How were the Hawaiian Islands formed for kids? Over time, the lava from the erupting volcanoes combined with sea water and created more layers of sand and rock, like adding layers to a big cake. Eventually, these ever taller layers of lava created the land we now know as the Hawaiian Islands.

Were there people on Hawaii before the Polynesians? The Hawaiian islands were first settled by Austronesian people around 900 AD, by the final wave of Pacific Polynesian explorers coming from ancient Taiwan.

Where did the Hawaiians originate from? Superb voyagers, Polynesians from the Marquesas Islands migrated to Hawai`i more than 1,600 years ago. Polynesians were well established on the islands when, about 800 years ago, Polynesians from the Society Islands arrived in Hawai`i. Claiming descent from the greatest gods, they became the new rulers of Hawai`i.

What makes the sand black in Hawaii? The black sand beaches of Hawaii are made of the most common type of black sand on Earth. This type of black sand is formed by volcanic materials and lava fragments. You can find black sand beaches on many volcanic islands around the world such as the Canary Islands and Iceland.

Which is the oldest Hawaiian Island? Kauai is the oldest of the Hawaiian Island chain. Kauai is approximately 5.1 million years old and it was formed by volcanic activity, wind and other elements.

What was Hawaii before it was a state? The Kingdom of Hawai?i was sovereign from 1810 until 1893, when resident American and European capitalists and landholders overthrew the monarchy. Hawai?i was an independent republic from 1894 until August 12, 1898, when it officially became a U.S. territory. Hawai?i was admitted as a U.S. state on August 21, 1959.

How long will Hawaii last? We know Kauai will most likely disappear completely in 1-1.5 million years, Oahu will take place as the oldest Hawaiian island, Maui will continue to reshape its landscape (with Haleakala giving it's last show of bursting lava before losing its connection to the hot spot) and Big Island volcanoes will eventually finish ...

Why do the Hawaiian Islands go in a northwest direction? The Hawaiian islands are near the center of the Pacific Plate, which is moving toward the northwest as material is added to the plate from the midocean ridge off South America.

What will happen to the Hawaiian Islands in the future? The island erodes and the crust beneath it cools, shrinks and sinks, and the island is again submerged. Millions of years from now, the Hawaiian Islands will disappear when the edge of the Pacific plate that supports them slides under the North American plate and returns to the mantle.

What is the geological history of the Hawaiian Islands? The oceanic crust on which the Hawaiian Islands reside is nearly 90 million years old, yet the oldest of these islands was formed a mere 5 million years ago. In fact, the youngest is less than a half million years old.

Who birthed the islands of Hawaii? It is generally believed Hawai?i's first permanent inhabitants sailed in voyaging canoes from the southern hemisphere islands of the Marquesas, between 300 and 800 A.D. Later waves of settlers arrived by the 12th century, this time from Tahiti.
