Unit 1: Colour in NGL Life

What is Colour?

Colour is a property of light that is associated with its wavelength. Different wavelengths produce different colours, which are perceived by our eyes and processed by the brain. In NGL, colour is used extensively to convey information, create visual interest, and enhance readability.

How is Colour Used in NGL Life?

In NGL, colour is used in a variety of ways to enhance the user experience. For example, colours are used to:

- **Identify elements:** Different colours can be used to identify different elements on a screen, such as buttons, links, and text headers.
- **Create visual hierarchy:** Colours can be used to create a visual hierarchy, which makes it easier for users to find the most important information.
- **Enhance readability:** Colours can be used to enhance the readability of text by making it easier to distinguish between different words and phrases.
- **Convey emotion:** Colours can be used to convey emotion, such as happiness, sadness, or excitement.

What are Some Common Colour Schemes?

There are many different colour schemes that can be used in NGL life. Some of the most common include:

- **Monotone:** A monotone colour scheme uses only one colour, or variations of one colour.
- **Complementary:** A complementary colour scheme uses two colours that are opposite each other on the colour wheel.
- **Triadic:** A triadic colour scheme uses three colours that are equally spaced around the colour wheel.
- **Analogous:** An analogous colour scheme uses three colours that are adjacent to each other on the colour wheel.

How to Choose the Right Colour Scheme?

The best colour scheme for your NGL life will depend on the specific purpose and audience of your design. Consider the following factors when choosing a colour scheme:

- **Purpose:** What is the purpose of your design? Is it to inform, persuade, or entertain?
- **Audience:** Who is your target audience? What are their preferences and expectations?
- **Context:** What is the context in which your design will be used? Is it on a website, in a mobile app, or in print?

Where Can I Find More Information About Colour in NGL Life?

There are many resources available online and in libraries that can provide more information about colour in NGL life. Some of the most helpful resources include:

- **W3C Web Content Accessibility Guidelines:** The W3C Web Content Accessibility Guidelines provide recommendations for making web content accessible to people with disabilities, including those with colour vision deficiencies.
- **Colour Contrast Analyzer:** The Colour Contrast Analyzer is a tool that helps you test the contrast between two colours to ensure that they are readable.
- **Colour Theory for Designers:** Colour Theory for Designers is a book that provides a comprehensive overview of colour theory and its application in design.
