Steps to Configure Oracle 11g Data Guard Physical Standby

1. Prerequisites:

- Primary database must be running in ARCHIVELOG mode.
- A physical standby server must be available with the same database structure and compatible version.
- A redo transport method (e.g., RMAN or Oracle Streams) must be configured.

2. Create Physical Standby Database:

- On the standby server, create a new database using the same name and recovery area as the primary database.
- Set the database to MOUNT state using the command: "ALTER DATABASE MOUNT."

3. Establish Standby Relationship:

- Connect to the primary database and use RMAN or Oracle Streams to establish a standby relationship with the physical standby database.
- For RMAN, use the command: "RMAN TARGET DATABASE RECOVER STANDBY DATABASE PHYSICAL."
- For Oracle Streams, use the command: "CREATE DATABASE LINK ..." to create a database link to the primary database, and then enable Oracle Streams using the command: "ALTER DATABASE ENABLE REPLICATION."

4. Open Physical Standby Database:

- On the standby server, open the physical standby database in read-only mode using the command: "ALTER DATABASE OPEN READ ONLY."
- Verify that the standby database is receiving redo data and applying it.

5. Manage Physical Standby Database:

- Monitor the standby database for any errors or discrepancies.
- Perform periodic backups and restore tests to ensure data integrity.
- Use RMAN or Oracle Streams to manage the standby relationship, including failover and switchover operations.
