What is the difference between apigee and DataPower? What is the difference between apigee and DataPower? Both meant for different purpose. Generally, DataPower used for authentication most of uses cases, where Apigee enable digital technologies. In addition, it is establish the connectivity from both external/internal/Omini connectivity.

What is the difference between API connect and DataPower? The IBM DataPower Gateway is a security and integration platform. IBM API connect leverage existing installation of IBM DataPower Gateway. IBM API Connect is more flexible and easy to use. It has a lot of features that differ in the market like API monetization & analytics.

What is IBM DataPower used for? IBM Datapower provides security for web services and architectural attacks, renders network-level security using SSL/TLS and also offers message-level security using Encrypt, Decrypt, Sign and verify actions.

Is DataPower an ESB? The focus always needs to remain on how your infrastructure is ensuring your business needs are met. Examples are leveraging DataPower as an ESB to reduce integration costs amongst a large number of service providers and consumers.

Is DataPower a good technology? IBM DataPower offers a robust platform for securing, integrating, and optimizing the flow of data within an enterprise. This comprehensive guide, the second article in our 'Navigating MQ' series, discusses some lesser-known best practices to maximize the benefits of IBM DataPower.

Is IBM DataPower an API Gateway? The DataPower® API Gateway has been designed with APIs in mind, and with the same security focus as DataPower

Gateway (v5 compatible). Where DataPower Gateway (v5 compatible) was built for flexibility, DataPower API Gateway is built specifically for the API use case, with resulting performance benefits.

What is gateway peering in DataPower? The gateway-peering command sets the gateway peering instance for the gateway cluster that defines the storage to hold the configuration data from API Connect, peers of the API gateway, and peering settings to synchronize the distributed state among peers.

What is web service proxy in DataPower? The web service proxy is a DataPower® service that can handle traffic for various endpoints that multiple WSDL files describe.

What is DataPower operations dashboard? IBM DataPower Operations Dashboard delivers advanced operations for real-time visibility of transactions and centralized operations to enable quicker problem termination and operational resiliency.

What is DataPower XI52? DataPower XI52 acts as the gateway for all IBM MobileFirst Platform Foundation and Application Center requests. DataPower validates all incoming user credentials against an LDAP registry.

What is IDG in DataPower? IBM DataPower Gateway (IDG) X2 provides gateway functionality. and is a security enforcement point. Also supports intelligent load. distribution and dynamic routing. IDG X2 is used for service level.

What is B2B DataPower? The DataPower® Gateway provides support for B2B (business-to-business) transactions among internal trading partners and external trading partners. Availability: DataPower Gateway with the B2B feature. The DataPower Gateway should be deployed at the edge of a business network.

What is the difference between Apigee and API connect? Apigee offers a robust analytics platform with advanced insights and customizable reports, allowing organizations to monitor API performance, identify bottlenecks, and optimize their API strategy. IBM API Connect also provides analytics and reporting, but it may have less advanced features compared to Apigee.

What is the difference between API and data pipeline? Data Pipeline provides you with a single API for working with data. The API treats all data the same regardless of their source, target, format, or structure.

What is the difference between Apigee and Azure app Gateway? How does Apigee differ from Azure API Management? Apigee offers both cloud-based and on-prem options while Microsoft Azure API Management currently only offers a cloud-based solution. Both solutions are easy to use. Apigee allows for the ability to code in any language.

Is Apigee similar to API Gateway? Apigee is a comprehensive API management platform for security, usage metering, analytics, and scalability. On the other hand, "API Gateway" is a generic term referring to various tools or solutions that manage and optimize API traffic.

What are the guidelines for epidural analgesia in labour? Prime the giving set. Attach the giving set to the epidural catheter. Administer a 5 ml bolus of bag mix using the patient demand button. Consider administering a further 1 - 5 ml clinician bolus, • The patient will next receive a programmed bolus of 7ml 20 minutes later.

When is epidural anesthesia given during labor? A woman can get an epidural at almost any time in labor if she can remain relatively still; however, an epidural is generally not given if the baby is close to being delivered. Some women have heard they need to be dilated (meaning the cervix opens in preparation for birth) a certain amount before an epidural is given.

What are the contraindications for epidural anesthesia in labor? Contraindications to any form of neuraxial anesthesia during labor include patient refusal, active maternal hemorrhage, increased intracranial pressure, septicemia, infection at or near the puncture site, and clinical signs of coagulopathy (including ongoing thromboprophylaxis with low-molecular-weight or ...

How to assess epidural blockade? While assessing the epidural block, observe for any change in facial expression as the ice is applied, muscle flinching or pushing away. Gentle palpation over the surgical site can also give an impression of comfort if the epidural is effective or pain if the epidural is not effective.

What is the gold standard for labour analgesia? Neuraxial techniques are the gold standard for intrapartum labour analgesia.

When is epidural anesthesia contraindicated? Absolute contraindications Uncorrected hypovolemia. Increased intracranial pressure. Infection at the site. Allergy to local anesthetic (For more information, see Local Anesthetic Agents, Infiltrative Administration.)

Can you get an epidural at 7 cm? Hospitals and doctors have their own individual policies for epidurals. In most cases, however, an epidural will not be given until the mother is at least 3-4 centimeters dilated. Once the mother is fully dilated most doctors and hospitals will consider it too late for an epidural to be given.

What are the indications for epidural anesthesia? Epidural medication administration can serve as a primary anesthetic if placed preoperatively or a supplemental resource for intraoperative or postoperative pain control depending on the medication used and the medication's concentration.

How many cm dilated for epidural? Many people choose to get an epidural during the first stage of labor once their cervix has dilated to around 4-5 centimeters – this is right before active labor typically begins. If you're eight or more centimeters dilated, it's likely that your care team won't have enough time to place the epidural.

What are the guidelines for epidural removal? The ASRA Guidelines recommend delaying 24 hours for the first dose postoperatively and 24 hours after the last dose for epidural catheter removal.

What are the coding guidelines for epidural steroid injection? A transforaminal epidural steroid injection (TFESI) performed at the T12-L1 level should be reported with CPT code 64479. When reporting CPT codes 64479 through 64484 for a unilateral procedure, use one line with one unit of service.

What level of epidural is best for labor? For adequate pain relief during the first stage of labor, coverage of the dermatomes from T10 to L1 is necessary; analgesia should extend caudally to S2–S4 (to include the pudendal nerve) during the second stage of labor. Epidural placement at the L3–L4 interspace is most common in laboring patients.

What are the indications for epidural analgesia?

Who did Ivan Galamian teach? Ivan Galamian was a world-famous violin instructor who taught some of the best violinists in the world, including Itzhak Perlman, Sergiu Luca, Pinchas Zukerman, Ani and Ida Kavafian, Kyung-Wha Chung and Dorothy DeLay.

Who is the father of violin technique? Corelli was a masterful violinist whose performances greatly promoted the instrument. Indeed, he has been called the "father" of violin technique. Corelli taught the instrument, and then his students taught a subsequent generation, and so on.

Who was the famous violinist prodigy? Joshua Bell When it comes to modern violin prodigies, Joshua Bell's name shines brilliantly. Born in Bloomington, Indiana, Bell picked up his first violin at the age of four, leading him on a journey to become one of the world's most acclaimed violinists.

The Practice of Adaptive Leadership: Q&A with Author Keith Walker

Adaptive leadership is a style of leadership that is flexible and adaptable, enabling leaders to respond effectively to changing circumstances and complex challenges. In his book, "The Practice of Adaptive Leadership," Keith Walker outlines the key principles and practices of adaptive leadership. Here are excerpts from a Q&A with Walker about his work:

Q: What is the central idea behind adaptive leadership?

A: Adaptive leadership is about leading in ways that enable organizations and individuals to navigate uncertainty and change successfully. It emphasizes the need for leaders to be flexible, collaborative, and able to learn from their experiences.

Q: How can leaders develop the mindset necessary for adaptive leadership?

A: Fostering an adaptive mindset involves cultivating humility, embracing curiosity, and seeking out perspectives that challenge one's own assumptions. Leaders must also be willing to experiment, learn from mistakes, and adjust their approaches as needed.

Q: What are the key practices of adaptive leadership?

A: Adaptive leaders engage in practices such as listening attentively, asking probing questions, building trusting relationships, and creating safe spaces where people can voice their concerns. They also actively seek diverse perspectives, encourage innovation, and continuously monitor and evaluate progress.

Q: How can leaders apply adaptive leadership in their daily work?

A: In everyday practice, adaptive leaders pay attention to the complex dynamics of their organizations and the broader context in which they operate. They foster open communication, encourage collaboration, and empower teams to make decisions. They also create opportunities for experimentation and learning, recognizing that mistakes are inevitable in the process of adaptation.

Q: What are the benefits of adaptive leadership?

A: Organizations that embrace adaptive leadership experience increased agility, resilience, and innovation. They are better equipped to navigate change, respond to challenges, and seize opportunities. Adaptive leaders empower their teams to take ownership and contribute to the organization's success, fostering a culture of trust and accountability.
