SQL Server Analysis Services 2012 Cube Development Cookbook Q&A

Q1: What is a cube in SSAS 2012? A1: A cube is a multidimensional data structure that allows for fast and efficient analysis of large datasets. It contains measures (numeric values), dimensions (attributes or categories), and hierarchies (ordered levels of dimensions).

Q2: How do I create a cube using the Cube Development Cookbook? A2: The cookbook provides step-by-step instructions on creating a cube from scratch. It covers topics such as defining dimensions, measures, hierarchies, and relationships. You can follow the cookbook to create a basic cube or customize it to meet your specific requirements.

Q3: What are the different types of measures I can create? A3: SSAS 2012 supports various types of measures, including calculated measures, aggregated measures, and KPI measures. Calculated measures allow you to define custom calculations based on existing data, while aggregated measures summarize data across multiple dimensions. KPI measures are used for performance monitoring and target tracking.

Q4: How can I handle empty values and missing data in cubes? A4: The cookbook addresses the issue of empty values and missing data by providing techniques for handling them. It explains how to use NULL values, default values, and imputation methods to ensure data integrity and consistency in your cube.

Q5: How do I deploy and manage a cube after development? A5: Once you have created a cube, the cookbook guides you through the process of deploying it to SSAS. It covers topics such as configuring permissions, optimizing cube performance, and monitoring its usage. You will also learn how to maintain and update the cube as your data changes over time.

Secrets of Closing the Sale By Zig Ziglar

Zig Ziglar, a legendary motivational speaker and sales guru, believed that mastering the art of closing the sale is crucial for success in the business world. Here are some key secrets from Ziglar's teachings:

1. Ask for the Sale

- **Question:** Why is asking for the sale so important?
- **Answer:** Ziglar emphasizes that you need to directly ask for the sale to complete the transaction. By doing so, you convey confidence and clarify your intentions, making the customer aware that you expect them to make a decision.

2. Handle Objections

- **Question:** How can you effectively handle customer objections?
- **Answer:** Ziglar advises using the "FAB" technique: Find the objection, Acknowledge it, and Benefit back to why your product or service meets their needs. By addressing objections promptly and understandingly, you build trust and overcome any hesitation.

3. Use a Trial Close

- **Question:** What is a trial close and its purpose?
- **Answer:** A trial close is a subtle way to determine the customer's interest without directly asking for the sale. By asking questions like "Does this sound like something that would benefit you?" or "Do you have any concerns I can address?" you gauge their reaction and identify any remaining objections.

4. Offer Incentives

- **Question:** When and how can incentives be used to close the sale?
- **Answer:** Incentives can be powerful motivators to encourage the customer to commit. Ziglar suggests offering limited-time discounts, free trials, or special promotions to sweeten the deal and overcome any hesitation.

5. Summarize and Reassure

- **Question:** Why is it essential to summarize and reassure the customer after asking for the sale?

- **Answer:** Summarizing the key benefits and addressing any lingering concerns gives the customer confidence in their decision. By rephrasing their needs and matching them with your solution, you provide reassurance and reinforce the value they are receiving.
