What is the Concept of Active Server Pages?**

Active Server Pages (ASP) is a server-side web application framework from Microsoft that enables the creation of dynamic web pages. ASP allows developers to embed server-side code in HTML pages, which is executed on the server before being sent to the client browser.

What Replaced Active Server Pages?

ASP has been largely replaced by its successor, ASP.NET. ASP.NET is a more modern and robust framework that provides a wider range of features and capabilities.

What is the Difference Between Active Server and Passive Server?

In an active server architecture, the server actively handles user requests and processes data, while in a passive server architecture, the server responds only to requests initiated by the client. ASP is an example of an active server technology.

What is the Alternative to Active Server Pages?

ASP.NET is a popular alternative to ASP. Other alternatives include PHP, Java Server Pages (JSP), and Ruby on Rails.

What Language is Used in Active Server Pages?

ASP uses a proprietary language called VBScript (Visual Basic Script).

Is ASP Still Used?

ASP is still in use today, but it is increasingly being replaced by ASP.NET.

What are the Disadvantages of Active-Active?

- Data consistency issues can arise in the event of a network or server failure
- Increased complexity and maintenance overhead
- Potential for data corruption during failovers

What are the Pros and Cons of Active-Active vs Active-Passive?

Pros:

- Increased availability
- Improved performance
- Enhanced scalability

Cons:

- More complex and expensive
- Requires careful planning and implementation

What is Active-Active Server?

An active-active server is a server architecture in which two or more servers are configured to work together seamlessly. In the event of a failure of one server, the other server takes over without any interruption in service.

What is the Concept of Pages in SQL Server?

Pages are the fundamental unit of data storage in SQL Server. Each page contains a fixed amount of data (8 KB by default) and is identified by a unique page number.

What is the Main Difference Between HTML Pages and Active Server Pages?

HTML pages are static web pages that display the same content to all users. ASP pages, on the other hand, are dynamic and can display different content based on user input and server-side logic.

What is the Concept of Active Setup?

Active Setup is a technology that allows software to be installed on Windows computers without user intervention.

What is Active Browser Pages?

Active Browser Pages (ABP) is a Microsoft Internet Explorer technology that allows developers to create interactive web pages using VBScript.

Why do Databases Use Pages?

Databases use pages to store and organize data efficiently. Pages are typically read and written in blocks, which improves performance by reducing the number of disk I/O operations required.

What are Dirty Pages in SQL Server?

Dirty pages are pages that have been modified by a transaction but have not yet been committed to the database. Dirty pages are at risk of being lost in the event of a system failure or crash.

How Big is a Page in SQL Server?

The default page size in SQL Server is 8 KB. However, you can increase or decrease the page size to optimize performance for specific workloads.

What is the Difference Between Client Pages and Server Pages?

Client pages are web pages that are processed by the client browser. Server pages, on the other hand, are processed by the web server before being sent to the client browser.

Are JSP and ASP the Same?

JSP (Java Server Pages) and ASP (Active Server Pages) are similar technologies that allow developers to create dynamic web pages. However, JSP uses Java as its scripting language while ASP uses VBScript.

What are the Advantages of ASP over HTML?

- Increased interactivity
- Ability to create personalized web pages
- Easier access to database and other server-side resources

How to Run Active Setup?

You can run Active Setup by clicking on the installation package and following the on-screen instructions.

What is the Concept of Active Database?

An active database is a database system that can respond to and interact with events that occur in the real world.

What is the Difference Between Active Setup and Run Once?

Active Setup is a technology that allows software to be installed on Windows computers without user intervention, while Run Once is a process that runs only once when a user logs in to a computer.

**What Language is Used in Active Server Pages?**

ASP uses VBScript as its scripting language.

Why are Active Web Pages Powerful?

Active web pages are powerful because they allow developers to create dynamic and interactive web applications that can respond to user input and access server-side resources.

What is the Extension of the Active Server Page?

The file extension for ASP pages is ".asp".
