Will data scientists really no longer be needed in 10 years? Long story short, we still need data scientists. Though, the role will probably change in the next future. It will focus more on the algorithms and the data science process, rather than on programming. At that, low code tools will make the implementation of the whole process even more approachable and faster.

Is big data an outdated term? But we're less likely to use the term big data these days—we just call it data. We've begun to take for granted that data sets can contain billions or even trillions of observations and that sophisticated software can detect trends in them.

Is big data still hot? Big data is thriving within enterprises and enabling them to innovate with AI and analytics in ways that were impossible just a few years ago. Many of the most important revenue generating or cost saving AI workloads depend on massive data sets.

What is the biggest problem with big data? The sheer size of Big Data volumes presents some major security challenges, including data privacy issues, fake data generation, and the need for real-time security analytics. Without the right infrastructure, tracing data provenance becomes difficult when working with massive data sets.

What is the controversy with big data? As the evolution of Big Data continues, these three Big Data concerns—Data Privacy, Data Security and Data Discrimination—will be priority items to reconcile for federal and state governments, business owners, Big Data specialists and consumers.

Why does big data fail? One of the common big data failures is the incorrect evaluation and selection of big data technologies. Individuals with expertise in big data may have limited exposure to only one service or tool within each category, leading to a lack of awareness about alternatives that may better suit the project's requirements.

Is big data oversaturated? In conclusion, while some may argue that the market for data analysts is oversaturated, the evidence suggests otherwise. With the demand for data analysts continuing to grow and companies reaping the financial rewards of

data analytics, it's clear that the future is bright for data analysts everywhere.

Will big data lose its popularity to something else? Big Data's popularity is at its peak but in the future, its popularity won't fade that easily because its need is increasing day by day and the salary offered is often very high. there are so many opportunities across the world in several domains.
