Schaum's Outline of Vector Analysis, 2nd Edition: A Comprehensive Study Guide

Schaum's Outline of Vector Analysis, 2nd Edition is a comprehensive and concise study guide that provides students with the essential principles and techniques of vector analysis. The book is designed to help students understand the fundamental concepts of vector calculus, including vector algebra, differentiation, integration, and applications.

Question 1: What is the scalar product of two vectors?

Answer: The scalar product of two vectors is the dot product, which is a number that represents the cosine of the angle between the two vectors. It is calculated by multiplying the magnitudes of the two vectors and the cosine of the angle between them.

Question 2: What is the vector product of two vectors?

Answer: The vector product of two vectors is the cross product, which is a vector that is perpendicular to both of the original vectors. It is calculated by multiplying the magnitudes of the two vectors and the sine of the angle between them, and then finding the vector that is perpendicular to both of the original vectors.

Question 3: What is the gradient of a scalar field?

Answer: The gradient of a scalar field is a vector that points in the direction of the greatest rate of change of the field. It is calculated by taking the partial derivatives of the scalar field with respect to each of the coordinate variables.

Question 4: What is the divergence of a vector field?

Answer: The divergence of a vector field is a scalar that represents the net outward flux of the vector field from a given point in space. It is calculated by taking the sum of the partial derivatives of the vector field components with respect to each of the coordinate variables.

Question 5: What is the curl of a vector field?

Answer: The curl of a vector field is a vector that represents the circulation of the vector field around a given point in space. It is calculated by taking the cross product of the gradient of the vector field with the vector field itself.
