What is the OmniFocus method? In OmniFocus, Context views group actions by their required context. This way, instead of working through a project action by action — which could take you to many different places or require different tools — you can consider what's available to you now and go from there.

Why use OmniFocus? OmniFocus makes it easy to define groups of actions or even entire projects that are sequential in nature. OmniFocus can then be configured only to show available actions — in this case, the next available action in the sequence.

What is the difference between OmniFocus 2 and 3? Beginning with OmniFocus 3, we introduced a new system for setting up custom repeat intervals on recurring actions. Since there are a wider variety of repeat options than in OmniFocus 2, the interface there does not display and cannot edit repeat rules created in OmniFocus 3.

Simulacra and Simulation: Jean Baudrillard's Postmodern Reality

Q: What is the concept of "simulacra" in Jean Baudrillard's work? A: Simulacra are copies or representations of reality that have no original or referent. They become so detached from their source that they take on a life of their own, creating a hyperreality where simulation becomes indistinguishable from the real.

Q: How does Baudrillard describe the "simulation"? A: The simulation is a pervasive and all-encompassing system that replaces reality with its own artificial and fabricated version. It creates a seamless world where distinction between the true and the false becomes blurred.

Q: What are the implications of this "hyperreality" for Baudrillard? A: Hyperreality leads to a loss of authenticity and a crisis of meaning. Individuals become alienated from their own experiences as their world becomes increasingly mediated and simulated. Authenticity becomes a simulacrum, and meaning is derived from artificial and arbitrary systems.

Q: How does Baudrillard's work relate to postmodernism? A: Baudrillard's ideas align closely with postmodernism. He challenges the metanarratives and grand theories of modernism, argues that reality is a constantly shifting and uncertain construct, and emphasizes the fragmentation and fragmentation of experience in contemporary society.

Q: What are the key criticisms of Baudrillard's concept of simulacra and simulation? A: Critics argue that Baudrillard overstates the extent to which reality has been replaced by simulation, underestimating the persistence of genuine

experience. They also question the idea that the distinction between the true and the false has completely disappeared.
