What is the goal of the observer? The goal of Observer is to establish dynamic one-way connections between objects, where some objects act as subordinates of others. There's a popular implementation of the Mediator pattern that relies on Observer.

What is the concept of observer? An observer is a person who makes measurements (observations) on a system to gain information about it. This information can be communicated to other people in the form of a description. Our concept of an observer is based on considering a person with senses seeing, hearing, feeling or smelling something.

What is the observer theory? But a key concept of observer theory is that it's possible to make conclusions about an observer's impression of the world just by knowing about the capabilities—and assumptions—of the observer, without knowing in detail what the observer is "like inside".

How do you understand the observer is the observed? There is a difference between the observer and the observed. In that division there is always conflict. The observer is the past, which is the 'me', the prejudices, the experiences, the knowledge, the whole structure of time, which is the past. That past looks at 'what is', which is the observed.
