- **Creating a game loop:** The game loop is the main event loop of the game. It is responsible for updating the game state, drawing the game??, and handling user input.
- **Using the Canvas element:** The Canvas element is used to draw the game??. It provides a low-level API for drawing pixels, lines, and shapes.
- **Using the EventListener object:** The EventListener object is used to handle user input. It allows you to listen for events such as mouse clicks,

key presses, and touch events.

3. What are some advanced JavaScript game development techniques?

Some advanced JavaScript game development techniques include:

- **Using WebGL:** WebGL is a cross-platform API for rendering 3D graphics on the web. It can be used to create complex 3D games that are impossible to create with Canvas alone.
- **Using WebSockets:** WebSockets is a protocol for real-time communication between a web browser and a server. It can be used to create multiplayer games that allow players to interact with each other in real time.
