1. Increased power consumption: Setting the port speed to 300 Mbps may increase the switch's power consumption slightly.
2. Compatibility issues: If the connected devices do not support Fast Ethernet or full-duplex mode, they may experience connection problems or performance issues.
3. It is important to verify compatibility before configuring this command.

Question: What other commands can I use to configure Cisco Catalyst 300 series switches?

Answer: In addition to the "300 115 switch cisco" command, Cisco Catalyst 300 series switches support a range of other commands for network configuration and management, including the following:

1. "show interface status" - Displays the status and statistics of all switch interfaces.
2. "configure paging disable" - Disables the automatic paging of command output.
3. "copy running-config startup-config" - Saves the current running configuration to the startup configuration file.
4. "show spanning-tree" - Displays information about the Spanning Tree Protocol (STP).
