Solutions to Exercises in Introduction to Logic: Unknown Binding

Introduction

Irving M. Copi's "Introduction to Logic" is a classic textbook that introduces students to the basic principles of logical reasoning. One of the challenges in logic is dealing with unknown binding, where the scope of a variable is not clear. This article provides solutions to selected exercises from Copi's textbook that demonstrate how

to handle unknown binding.

Question 1

Translate the following argument into symbolic form:

All cats are mammals. Some mammals are pets. Therefore, some pets are cats.

Answer:

(x)(Cx ? Mx) (x)(Mx ? Px) ? (x)(Px ? Cx)

Question 2

Determine the validity of the following argument:

If it is raining, then the ground is wet. The ground is not wet. Therefore, it is not raining.

Answer:

The argument is valid. This is an example of a hypothetical syllogism, where the major premise is a conditional statement. The conclusion follows logically from the given premises.

Question 3

Find the domain of discourse for the following open sentence:

(x)(x > 0)

Answer:

The domain of discourse is all real numbers greater than zero. This is because the variable 'x' is not further restricted by any other quantifiers or conditions.

Question 4

Determine whether the following argument is true or false:

All dogs are animals. Some animals are horses. Therefore, some horses are dogs.

Answer:

The argument is false. The premises do not support the conclusion because the domain of discourse for 'animals' is different in each premise.

Question 5

Translate the following statement into a logical expression:

There exists a student who is both smart and athletic.

Answer:

(?x)((Sx ? Ax))
